

# Delta tap

## Innovation

### SIMPLE AND EFFICIENT

The worldwide patented Delta enables the air to enter and thus doesn't require a second small tap on the tin and ensures a regular flow. This simple and reliable tap can be easily screwed to plastic tins and cans. A slight pressure allows the consumer to open the Delta tap and make the product inside flow. The closing is automatic as soon as the pressure is released.

### LARGE USE

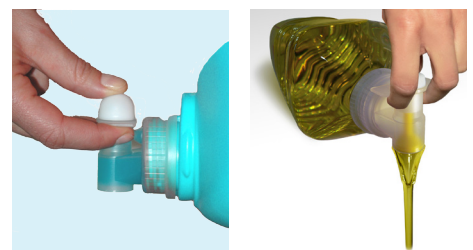

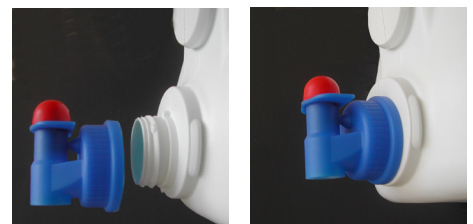

The Delta tap is suitable for many different products and different containers, such as chemicals, detergents or oils. Different colors can be chosen for the body and the cap.

## Benefits

### Advantages of Delta tap

- 1 **HYGIENE:** No drop in the pouring hole after closing. Prevents leakage thanks to its No Return Valve.
- 2 **EASY USE:** The measuring cap is filled quickly and the flow is perfectly smooth. A slight pressure allows the consumer to open the tap and the closing is automatic as soon as the pressure is released.
- 3 **NO WASTING:** Prevents leakage thanks to its No Return Valve. If external pressure is applied to the rigid container during pouring, an inner ball shuts air entry and prevents liquid from escaping. A measuring cap can be placed on the Delta-Tap.
- 4 **RECYCLABILITY AND SAVINGS:** The recyclability is improved as the tap is spring-free. As the number of components has been reduced, the Delta-Tap is economical and does not require an extra fitment for air entry.
