

# Driller

## Innovation

### INGENIOUS

The Driller tap enables quick and simple pouring of liquid from a plastic bag. The consumer only has to pierce the filled bag with a simple thrust of the driller tap just before use. After removing the tamper evident lid, the liquid then pours through the tap in a regular flow instead of splashing when cutting off a hole in the bag. The closing is automatic when the tap is released.

### WATER SAFETY ABOVE ALL

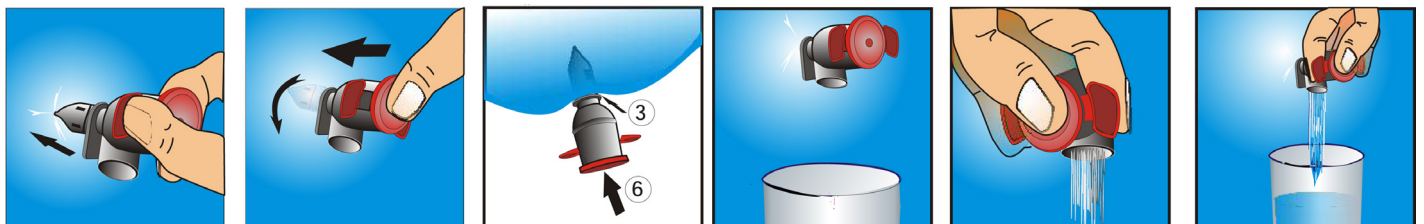

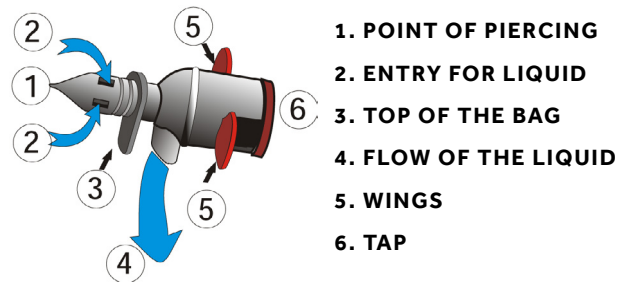

Once the Driller tap enters the bag, it remains tight with no product contamination - the use is hygienic and safe, especially suitable for areas lacking water or for humanitarian actions. New taps can be packed individually or collectively and can be reused.

## Benefits

### Advantages of Driller tap

- 1** **HYGIENE:** Remains tight with no product contamination. Tamper evident. Packed individually or collectively
- 2** **EASY USE:** Simple pressure on the tap is enough to pierce the bag. Tamper evident lid can be easily removed for an immediate use.

Place the point

Push

Insert the tap

Turn the bag to pour

Push the wings to pour

Release the wings to stop pouring
